

## WATERING SCHEDULE

The irrigation system is designed for use based on a rotation system. The system is not designed to allow all homeowners to water at the same time. If too many homes irrigate at the same time, especially during the peak use time of 5:00 a.m. – 9:00 a.m., the pump station will produce low pressure and volume and may shut off.

Your watering time is based on the last number in your house address number. For example, if your house address ends in a 3, you can water at 3:00 a.m. **OR** 3:00 p.m. You may water for a maximum of two (2) hours. Odd numbers water on Tuesday, Thursdays and Saturdays. Even numbers water on Mondays, Wednesdays, and Fridays. Each homeowner must set their sprinkler controller to begin watering at a start time to coincide with this schedule.
